

Brainwave Research Participants Needed

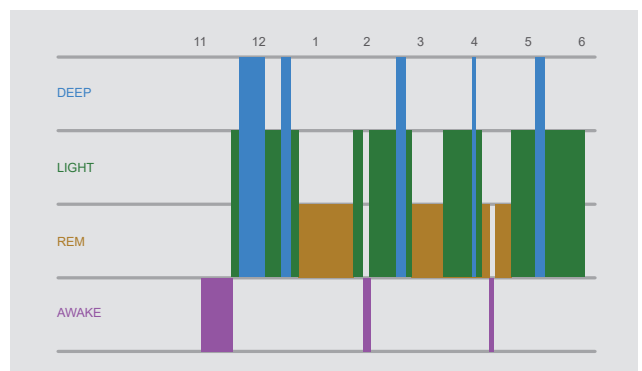

Contribute to science and learn about sleep!

Interested people are invited to participate in a home sleep study to increase our understanding of the different stages of sleep and how good sleep contributes to better memory.

For both Phase I and Phase II, studies will be conducted in the comfort of your own home after receiving the EEG device and instructions by mail. We will ask you to do an online memory test before and after sleep, and to record your brainwaves using the electroencephalograph (EEG) device during sleep. In Phase I, study participants will collect EEG during sleep on three nights, one of which will involve passing low levels of harmless electrical current through electrodes attached to your head to enhance your slow wave sleep. Participants will receive \$50/sleep session in Phase I. Phase II involves the memory test and EEG recording and stimulation nightly for 4 weeks. Participants will receive \$25/sleep session for Phase II.

To participate, you must be a generally healthy person between 21 and 85 years of age and be able to understand English. You must have no history of head trauma, insomnia, or neurological conditions, and must not be taking any drugs that may affect your EEG. You must have home internet access to participate.

To inquire about participating, please email studies@bel.company or call 541-525-9798. To learn more about us, please visit our website at www.bel.company.
